

Subject: Proposal Summary, Funding Structure, and Immediate Timing Constraints

Chris, Dr. Ken, Shawn, Crunch:

We are making substantial progress here. Advanced exits, modifications, and hold logic are nearly complete for model training. If I can keep my eyes open long enough, the system should be rolling within hours. That said, I have not slept — between writing the proposal and continuing development, it has been nonstop.

I'm not sure whether you reviewed the PDF sent to the group for discussion with Dr. Ken. Page 1 of that pdf is (was) time-sensitive (**13 hours remaining**) and outlines four structured paths forward.

Proposal Structures

These four proposed structures (Plan 1 – 4) are from the original document I sent.

Fortunately, they are, right now, now past tense, and are written below in Cliff Notes style just for reference purposes.

Plan 1 – Trade Partnership (as proposed last night – no longer valid)

- Total required: **\$15,000**
- Fastest capital recovery for Dr. Ken (realistically 1–2 weeks, max 1 month)
- Direct alignment via trading profits

Plans 2–4 – Milestone-Based Tranche Structures – no longer valid

- Total required: **\$25,000**
- Structured payouts tied to development milestones
- Plan 2 = fewest tranches (fastest path to go-live)
- Plan 4 = most tranches (longest path to go-live)

The key delta:

- Trade agreement: lower capital (\$15K), fastest repayment cycle.
- Milestone routes: higher capital (\$25K), longer return timeline.

Immediate Constraint: 11:00 AM Checkout

10:00 AM Your Time – **15 hours from now** - Tomorrow - Saturday late morning

Regardless of which structure is selected, or not, tomorrow at 11:00 AM we either pay or we get removed by the police whenb we are given 10 minutes to pack up and vacate the premises – not passing judgement, but viewing the people I see around here, would not be surprised if there is one or more serial killers among us – not kidding.

THIS IS NOT THEORETICAL.

Page 1 of the proposal outlined what used to be, until this evening, the immediate bare-minimum survival and operational requirements. Until I caught my 6th wind and revised the entire proposal a bit further down in this document. That does not alter what my fiancé need to receive hopefully by tonight before 10pm our time – that is in approx. 1.5 hours from now – my confidence is dwindling and this is not easy having your significant other look at you from across the room every 5 minutes while I am working, writing, thinking asking me did anything come through so I can let the front desk know and pay them? I have no answer for her as of current.

Today's Immediate Requirement (Bare Bones)

Hotel (weekly rate + deposit): \$600

Food (1 week, survival level): \$210

TradingView Subscription: \$70

Immediate Transfer (Zelle/PayPal/CashApp): \$880–\$890 – We need to receive this before 11am our time (10am your time) tomorrow, or let us know to pack up that it will be sent on this day at this time, but being left in the land of the unknown is scary for my fiancé, not so much for me, as my faith in GOD is strong that whatever happens is because of his will being done on Earth as it is in Heaven. So, for that reason, I stay calm and levelheaded. But my fiancé is a red-head, a woman, in her period right now, and to be frank, I will be lucky if I wake up with my balls still attached – if you hear my voice has gone up from around the 4KHz range to around 14KHz range, you know what happened.

Receiving this tonight avoids unnecessary pack/unpack inefficiency at checkout, run-ins with the police as if we are criminals, and maintains the harmonics and frequency and tone of my current voice.

Zelle (my fiancé Amy Sue Millette): 720-425-1074

Cash App: \$JerryPhysicist

Paypal: zap101@yahoo.com

Amount: \$100 *one night*. \$600 *one week* (incl. \$100 deposit) \$880 (*Food and Subscription*)

Remember – It absolutely must be received by no later than 10am Feb 28, 2026.

Thank you so much for your time and consideration of keeping this project rolling forward. My fiancé and I are grateful for your help and continued life-support.

Hardware Risk (Urgent, Critical, Titanic)

If this current PC fails, we are not delayed weeks — we are delayed **10–12 months**. I am not sure you are visualizing the hard reality of this PC failing on my end before getting a new one to migrate over to. USB ports are dead, so cannot backup to hard disk, keyboard and mouse on the laptop have cutout on me writing this to you 4x now hence why it is taking so long to send it.

It is highly unstable and has been for 3 months since I found it in the dumpster:

- The screen intermittently dies.
- The keyboard can take 30 minutes to register input.
- This morning the display went blank entirely for a couple hours (not the one attached to the laptop that one has been dead since the Hospital, I mean outputting via mini-display port to hdmi adapter to the TV in our room – the only way to see what you are doing.
- Uploading a 309MB dataset recently took over (>) **8.6 hours** (not necessarily by fault of the PC alone, because the internet access around here, would test Bob Ross' patience).

UNFORTUNATELY, THIS IS NOT AN EXAGGERATION.

Attempting to build advanced neural architectures and trade live futures/options markets under these conditions is equivalent to performing brain surgery with 2x4s and bricks, and expecting a healthy recovery from the patient afterward...*not the case!*

REQUIRED HARDWARE

- Functional mid-grade performance laptop (GPU-class capable): **\$3,799**
- Proper trading monitor: **\$699**
- Verizon MiFi 5G (reliable connectivity): **~\$220/month**
- Hotel (3–4 weeks runway): **~\$2,100**
- Food + subscriptions + buffer: **~\$1,000**

REVISED REALISTIC ABSOLUTE BARE BONES MINIMUM OPERATIONAL TOTAL:

~\$7,800

And NOT \$15,000 as from the initial proposal this morning. I thought about how we could shave the costs down to the absolute lowest possible so a) I can pay it back faster and b) we can start sharing in trading profits faster, and c) it would be absolutely impossible for anyone to say they can beat this proposal in terms of shaving costs – You cannot - so we are now past the *theoretical questioning* of, “Lets see, how can we do this, that, or the other for < \$1000.00?” or some fictitious budget amount in mind, which does nothing but kick the can, cause dangerously close delays where my fiancé and my life are put in potential jeopardy, and if no new PC before this one says buh-bye it is highly probable it would cause irreparable damages to this project, and this project will undoubtedly fail. I am trying here

in every direction I can to wave the flag, send up the flares, whistle, dance, jump, sing, do dog tricks, etc for the past several weeks about this, and timelines I put down are not theoretical, being a Physicist I respect time, and don't use Heisenberg's uncertainty principle either, what I do is state the facts chronologically and hierarchically, so please know when I say 15 hours left, that does not mean we can get to it on Monday, that means in 15 hours my fiancé and I are on the streets, and if that happens I can tell you, chances are just like last time, I will lose everything I own, including this laptop as its tough out their on the cold concrete in the freezing cold, its what killed me last time and I was revived abd hospitalized, this time I may not be so lucky. Please know there is no humor in my timelines, and no humor if I let you know something is urgent, it means I waited until the last minute to do anything and everything I possibly could to avoid having to write this, yet, here I am writing it, 15 hours before being booted, and no idea how, when, who, or where anything will be sent to sort this out.

With all due respect, this is ridiculous – Please don't take me the wrong way or as being ungrateful, even if you gave me \$1.00 I would be grateful and thankful, the fact is for > 2 months collectively between Chris and Crunch I have received just over \$5000.00 or approximately \$2500.00 per month, and that was less than bare bones minimum – but we managed to survive thanks to both of them and much thanks to GOD – Amy and I love, and so much appreciate everything you have helped with this far, to keep us off the street and keep me working nonstop, but if we cannot finish the project, that would have been a big waste of your money and my time (*which is 24/7 practically non-stop on this project*). We are within 15 hours of that possibility of failure becoming a full-blown reality – it brings me to tears as we are talking about such a small amount of money by comparison to offerings that raise \$5M under a 506 Reg D PPM Offering to develop the worlds most advanced FinTech neural net architecture in existence globally with patentable IP, in fact, under any normal operations, it would be more like a \$10M raise from a Series A VC, \$50M from a series B, and setup for M&A with an IB or Series C with the Corp VC entities, then sell it in parts limited by exclusive licenses or tech transfers where fields of use are limited, or in its entirety provided the cap table looks clean and no liabilities incurred by the purchaser. That is \$60M to develop such IP and get it into a state where it can be commercialized successfully. That is the Silicon Valley VC 101 – this is how we do it. Ok, been there done that, a nasty group made their way on to the ship, capsized it and I kicked them off the ship 3 times in a row and luckily found new direction and turned the charred remains around, rebuilt it, only for these bastards to come in and use government organizations to effectuate their control and slandered my good name so heavily in the press, after beating their asses 3 times in a row in vicious litigation court room battles, they blindsided me and the companies, and still to this date, because I popped their egos when I defeated them,

the real illuminati good ol' boys club, I lost everything I own, was framed and sent to prison, and now I get out, my mind takes off yet again, but this time, not going to do it the VC or working capital through the banks way – that damn near killed me last time – never again!

Instead of raising \$60M through Series A and B, I initially asked for \$25K, praying this would be resolved today. Now, I have been able to shave the costs down to \$7500.00 and hence this report – if after running companies and developing and patenting software technology for > 27 years, I cannot raise \$7500 just to keep my fiancé and myself alive, have food, get a PC that suits the job and tasks, get TV renewed for dataset downloading of my custom indicators, and have enough to take the bus when we need to go somewhere, then there really is no reason for me to even be working anymore. There was a day when literally I could pick up the phone, call just about anyone I knew, and asked, “Could you please wire me \$100K today and when I get back from Japan at the end of this month will get you paid back?” Within 2 hours the money is in my account, no questions asked, no delays, and done. I don't know what happened or what twilight zone I went through, but this does not even feel like planet Earth anymore or if it is, we are in a parallel universe where everything is opposite, do good by people, work hard, invent new tech, and then beg for mercy to stay alive! Lol

We are talking about \$7500.00 as a short-term loan to:

- **keep me stable** – which once again dangerously close to an outcome I cannot even think about right now as its preposterous, illogical, wrongful and incomprehensible.
- **get a real PC** - not a high-end one, middle grounds laptop – the least expensive one I could find with the hardware specs needed, so that I can get real work done with, trade with, and complete the project sooner than later so not stuck in this nightmare anymore
- **have food** - from the gas station for a week to have the brain power to work and actually continue living on Earth with my fiancé
- **have internet** - that actually works in accordance with today's bandwidth standards for Data and Software Engineering,
- **Trading View Subscription** - needed for the dataset for over a week now (\$70.00)
- **bus passes for 2** - so we can get around, see the doctor, get to the ER if needed, get to the grocery store and back, etc.

If I am missing something here, perhaps my expense/budget report can be shaved into \$1000.00 tranches over 7 months and get us everything needed? If so, teach me please as apparently, I missed that course.

THE IRONY IS DIFFICULT TO IGNORE:

A pallet stacker can earn ~\$7,500/month lifting 12,000 pounds per day.

Yet a Ph.D. physicist/software engineer building patentable neural trading infrastructure is being evaluated at roughly the same monthly rate.

The comparison is... educational.

Strategic Objective

Solve four constraints:

1. Stable housing
2. Reliable food
3. Functional hardware
4. Stable internet

Once resolved:

- Trading begins immediately on Dr. Ken's IB account (or new account).
- First distribution targeted within 2 weeks.
- Cash flow begins stabilizing the situation.
- Project advances at full velocity.

Without solving these four constraints, development velocity collapses, we go homeless, the project and all the hard work dies on the vine as more likely than not I do on a street corner somewhere – if that is God's pathway for me, so be it, but I don't believe GOD would keep me around on Earth just to go off and die in a gutter somewhere. I am not doing this for credibility, I know who I am and what I am capable of in my fields of study, I am not doing this to get back at those who sought to destroy me and still do (I could care less to be frank), I am not doing this to prove a point or try and change people's minds who were dumb asses to even believe a single word of the intensely defamatory and slandering press release about me, as I don't dwell in the past or get stuck looking in the rear view mirror as many mindless fools do. I am doing this because I am going to take the vast majority of any profits my fiancé and I make, and give it ALL back to GOD, give it back to GOD's children, to those suffering and who are homeless like me and were mistreated, beaten down, and left on the side of the street for dead, to help them come up, have a car, a home and a life again – Why? Because that is what I was instructed to do by the Holy Spirit in 2019. My entire life was stripped from my feet for no wrong-doings of my own, but for greed, lies and deception of a nasty group who sought to steal the IP from the company, and I am still the only one who stands in their way, and for that, I was beaten down hard lost \$250M (everything I own), and currently homeless. I don't want any of that back, I don't care anymore. I want to make sure that what happened to me does not happen to anyone else, and help those who are crying out and have nobody to turn to – crying to the Lord asking why am I freezing out here? My home, my family, my life – why? Because that is when you know you are one of God's chosen, as he will strip it all away to bring us back up to do his work. I wanted the team here to know that, to know that GOD stands before me, and to know that I will do my best until I am unable to do so. I am a forward driving machine, always have been, always will be, constantly staying focused on the positive forward direction of this company, this partnership, joint venture, whatever you want to call it.

For Clarification

We are not asking for luxury:

- Not Marriott.
- Not new vehicles.
- Not premium dining.
- Not high-end infrastructure.

We are asking for:

- Gas-station-level food.
- Weekly-rate hotel.
- One machine that works.
- Internet that does not take 8 hours to upload 300MB.

Market Note (Brief)

Separately — GC (Gold Futures), current liquid month (GCJ6).
Review M15 structure. **Key question:** continuation extension vs Fibonacci retrace.

I mentioned previously how to determine the precise opening bias at the Asian futures open.
That still applies.

Whoever identifies that correctly in the group gets one additional advanced trading principle, one that only a handful of people are privy to.

Closing

9:54 PM GMT-7 as I write this. **13 hours now until eviction.**

My fiancée is asking whether we are packing or staying. I cannot answer that until funds clear. If any element above appears excessive, I welcome an alternative operational plan that achieves:

- Housing – for at least a week starting tomorrow at 11am
- Food - For at least a week starting tomorrow at 11am
- Hardware – To continue this project, trade for Dr. Ken, and finish it on the fast track.
- Internet – Because 309MB files should take > 8 hours to upload.
- Model deployment – Enabling me to work to the best of my knowledge, experience, and capability
- Account trading – Cannot do that using the current hardware and wifi
- Capital growth – Can't grow something that never got finished to start in the first place.

For less. I am open to better math.

Thank you in advance for reviewing this seriously and promptly.

/ Jerry
